NEW YORK (CNNMoney)

Get ready to leave your wallet at home and pay for everything with your iPhone 6.

That's the vision Apple (AAPL, Tech30) set forth with Apple Pay, a wireless, digital wallet that is coming out in October. To pay for stuff at a store, just put your finger on the iPhone's fingerprint sensor and it hold it up to the register. Beep. You're done.

Want to pay for something in an app? Just tap "Pay with Apple Pay," put your finger on the fingerprint reader, and you're done.

The charge goes straight to your credit or debit card -- whatever you've set up with Apple.

It sounds great, but can Apple really reshape the payments industry the way it did for music and phones?
